Clinical Research	Patient-oriented research. Research conducted with human subjects (or on material of human origin such as tissues, specimens and cognitive phenomena) for which an investigator (or colleague) directly interacts with human subjects. This area of research includes: mechanisms of human disease; therapeutic interventions; clinical trials; development of new technologies; analysis of existing datasets; epidemiologic and behavioral studies; outcomes research and health services research.
Quality Improvement- Patient Safety	Submissions can report on efforts to improve patient safety or outcomes measurement. Such efforts may be projects developed and initiated to promote patient safety and/or processes that have improved or created a safer environment for patients. Abstracts may also be submitted that relate to the use of outcome data, how to measure and convert data into information.
High-Value Cost Conscious Care	Projects that focus on: reducing waste in the system (e.g. necessary testing and treatment or inappropriate setting for care), minimizing harms (e.g. radiation exposure, medication side effects), or improving patient care raea(r)-7
